AKSHAR PATEL

PROFESSIONAL SUMMARY

Passionate student seeking practical experience in a specific field through paid or unpaid internships. Committed to assisting with projects, acquiring new skills, and applying theoretical knowledge in real-world scenarios. Values mentorship, feedback, and exposure to various aspects of the business or industry. Views internships as invaluable opportunities to expand professional networks, enhance resume, and increase chances of securing full-time employment post-graduation. Available for part-time or full-time roles, demonstrating strong organizational skills and dedication to hard work. Excited to secure an entry-level position and contribute towards achieving company goals as part of a dynamic team.

Job Description: Database Administrator (MySQL Specialist)
Job Title: Database Administrator (MySQL Specialist)
Location: KMS
Job Type: Internship
Experience Level: Entry-Level

- I worked as a Database Administrator (DBA) with a focus on MySQL, where I was responsible for designing, implementing, maintaining, and optimizing database systems.
- I applied my deep understanding of relational databases, query optimization, data security, and backup strategies to ensure the integrity, performance, and reliability of the provided data.

Key responsibilities:

- **Database Design & Implementation:** Develop and maintain **MySQL databases** to support business applications and processes.
- **Query Optimization:** Write and optimize **SQL queries** to improve database performance and efficiency.
- **Data Security & Backup:** Implement security measures, backup strategies, and disaster recovery plans.
- **Database Administration:** Monitor database health, manage indexing, and handle data migrations.
- **Performance Tuning:** Analyze slow queries and optimize them using indexing and other best practices.
- **Collaboration:** Work closely with developers to integrate databases with applications and resolve issues.
- **Documentation:** Maintain up-to-date documentation on database structures, queries, and procedures.
